

# Durham Heart Newsletter

## Break during exams

During the month of May, Durham Heart is taking some time off to focus on our academics during the exam period. Our team has exams from the 14<sup>th</sup> of May to the 2<sup>nd</sup> of June, so we are restarting Durham Heart activities in June. We will be doing more prototyping and testing, with the aim of getting quantitative results. There will be no newsletter next month, but look forward to our June edition, where we should have updates on prototyping and testing.

## Mechanical Team

### Research and improvement

With both our designs prototyped, we are doing research into how to improve some of the problems the designs have shown now that we have physical models. One of the main areas is reducing friction and therefore wear on the moving parts, which would also help to improve the efficiency of the device, as it would take less force to overcome the lower friction.

## Electrical Team

### Research into sensors

With the 3D printed models of our two designs made, we want to test them in our mock loop circuit. For this, it would be very valuable to incorporate sensors to get numbers we can compare, rather than just seeing how our prototypes work. The electrical team is working on a system to integrate the sensors in the mock loop circuit and an app to be able to see the readings in real time as the system pumps.

## Business Team

### Stash delivery

We are thrilled to announce that our custom-designed fleeces for Durham Heart have arrived! It has been a pleasure seeing this vision come to life, and the final product truly captures the spirit of our team. These fleeces aren't just about staying warm on crisp Northeast mornings; they represent our shared commitment to cardiac health, and feature our signature branding. We can't wait to see the team wearing them around Durham!

# Thank you!
