

Durham Heart Newsletter

Whole Team meeting

On the 18th of February, we held our whole-team meeting, in which members of each sub-group described their contributions to the project and explained the technical details of how they supported the overall design. This was an amazing event to share information and update the whole team on the work being undertaken by each of the sub-groups. The event was followed by a social gathering that was also a great opportunity for further discussions.

What's Next for the Team

- work will continue into Easter!
- team will be taking over Engineering 23rd - 27th March (one week after end of term).
- have an interest in attending the Heart Hackathon competition in China, please do your best effort to attend!
- also having a visit from an expert in artificial hearts - Chris Bowles will be

Mechanical Team

Finalised design

With the aim to start prototyping our design before the easter break, the mechanical design sub-group has been working hard to improve our old design and compare it to some new concepts. With the list narrowed down to three main mechanisms to pump the blood, we are looking into the efficiency, feasibility and lifespan of each design.

Electrical Team

TET circuit prototyping

The electrical team has been working hard to design a wireless energy transfer system to eliminate the need for a drive line and reduce infection risk. They have computationally modelled a circuit and have begun to prototype so the simulations can be validated. Next for them is to begin working on building the motor.

Business Team

Ordering banners and stickers

This year, we plan to promote our project within the university more, including offer holder days in March and April. For these, we have designed and ordered 2 roll-up banners as well as stickers with our logo. These will continue to be useful for any publicity, such as open days and the freshers' fair. We also have begun contacting potential sponsors seeking support, be it financial, material, equipment or expertise.

Thank you!
